Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Raul Tamayo on 1/21/04.

The application has been amended as follows:

In the claims:

In claim 1, line 3, after "... which is ..." and before "... as a coating ..." the term "... applied ..." has been deleted and the term "- - disposed - -" has been inserted in place thereof.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

With regard to instant claim 1, the reason for allowance is applicant's recited container having a heterogeneous structure, comprising a material with a barrier effect and a polymer material, wherein the material with a barrier effect is an amorphous carbon material with a polymer tendency which is disposed as a coating on a substrate made of the polymer material, said amorphous carbon material with a polymer tendency contains CH, CH² and CH³ bonds in the proportions of 25, 60 and 15, respectively, and

Art Unit: 1772

the proportions of the electronic states sp^3 , sp^2 and sp are 53, 45 and 2 respectively.

The prior art does not teach applicant's recited container.

The closest prior art, Nagahsima in view of Danzer et al., teach a container having a heterogeneous structure, comprising a material with a barrier effect and a polymer material, wherein the material with a barrier effect is an amorphous carbon material with a polymer tendency which is disposed as a coating on a substrate made of the polymer material. However, neither reference teaches or suggests said amorphous carbon material with a polymer tendency contains CH , CH^2 and CH^3 bonds in the proportions of 25, 60 and 15, respectively, and the proportions of the electronic states sp^3 , sp^2 and sp are 53, 45 and 2 respectively. Furthermore, one of ordinary skill in the art would not have been motivated, to provide the missing six values to arrive at applicant's claimed invention.

Newly cited references, Dorfman (U.S. Patent No. 6,080,470) and Veerasamy (U.S. Patent No. 6,303,226 B1) are cited herein. Dorfman describes various proportions for the sp^3 and sp^2 electronic states only (15-90 for sp^3 and greater than 15% for sp^2 , see column 22, lines 38-67) in a hard carbon material in a multi-layered structure. Veerasamy describes a hard diamond-like carbon with an sp^3 content of at least about 35%, or 70%, or 80% (column 4, lines 41-58). However, neither reference discloses applicant's claimed amorphous carbon material with a polymer tendency contains CH , CH^2 and CH^3 bonds in the proportions of 25, 60 and 15, respectively, and the proportions of the electronic states sp^3 , sp^2 and sp are 53, 45 and 2 respectively.

Art Unit: 1772

Furthermore, one of ordinary skill in the art would not have been motivated, to provide the missing six values to arrive at applicant's claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
